

Custom Solutions: Volunteer Time System for Volunteer Management and Tracking

Do you find it challenging to keep up with volunteer time sheets? Time sheet entry can seem fast with Batch, but it still takes time. “Late shows” can be missed, especially if volunteers are working around the clock, and it’s difficult to know who’s working at a given time and who’s not.

Volunteer Time System can help! It’s a great tool for any organization using RE:Volunteer® that has many volunteers, volunteers who work from different locations, volunteers who work odd hours or around the clock, or has difficulties managing volunteer time sheets.

With **Volunteer Time System**, volunteers can log in, review messages, create time sheets, update biographical data, and view future volunteer opportunities. Data from the custom solution is written back to **The Raiser's Edge**® as time sheets, updated constituent data, and constituent actions.

Volunteer Time System is ideal for organizations that have:

- Numerous volunteers
- Volunteers who report to work at various locations
- Volunteers who work odd hours
- Trouble managing time sheets

Volunteer Time System:

- Gives you a forum for communicating messages to your volunteers
- Allows volunteers to clock in and out for only the jobs they are assigned to
- Permits volunteers to clock in and out for work from various locations
- Automatically calculates volunteer time sheets
- Enables volunteers to update their records and get information on upcoming opportunities and events
- Allows you to easily run queries at any time to see which volunteers are logged in

Plus, the application can be customized to your own look and feel and doesn’t use a user license!

Get Expert Help from Blackbaud. Contact us today to find out how fast we can help you get started! Working remotely, we can get you up and running within two or three months, and training and a user guide are provided as part of the implementation process!
